

ESCAPE Installation

Shanghai, 07th of May 2017

After installation of ESCAPE you should follow this steps to update the system.

1. License file

Copy the license file ("ESCAPE_License") to the folder "C:\Program Files (x86)\GTS\ESCAPEpro 2014\license"

2. Config-files

ESCAPE can be configured by the files in the "config"-directory. You will find this directory under the name of the project directory you created during installation. Please copy the latest config-files that you got with the installation software to this directory. Delete or backup the old versions.

3. LibSigCpp.dll / rcp.dll / AdaptMatLab.dll

Please copy these files to the directory " C:\Program Files (x86)\GTS\ESCAPEpro 2014\bin".

4. Company's logo for Document generation

Exchange "LogoGigatronik", "LogoCustomer" and "LogoMini" for own company's logo.

5. Login

When ESCAPE starts, a dialog will appear. Use "admin" as user name, no password required.

6. Projects directory

Projects are stored in the directory "CA98A1DB-4708-4419-B6FF-067A23F53AA6". Do not change the name or move this directory. ESCAPE will search for projects here during startup. Each project has an own directory path here. ESCAPE automatically saves and stores a backup version her.
